Sterifume Service

- **What is Disinfection & Why it is required?**
  - Disinfection is cleaning an article of some or all of the pathogenic organisms which may cause infection.
- **Why now?**
  - Sporadic cases of bacteria and virus related infections
- **How Sterifume Service - Microbial Disinfection helps?**
  - Sterifume Service - Microbial Disinfection is an effective treatment designed by Rentokil PCI.
  - Sterifume uses a unique formulation with powerful composition that surpasses all other disinfectants.

## Sterifume Service - Chemical Used

- **VIROFF 753** is a judiciously formulated broad spectrum antimicrobial composed of blend of alcohols and organic chemicals
- **Active Ingredients**
  - Blend of germicidal alcohols and quat salt
- **Mode of Action**
  - Solvent based disinfectant (Ready to use)

**VIROFF 753**

## Sterifume - Treatment Process

# Alliance Pest Control<sup>R</sup>

- **In order to be successful, certain preparations from the customer side are required:**
  - Client has to ensure all important or sensitive equipments are removed or covered with plastic sheets (non-removable items), e.g. computers, research tools and equipments.
  - Client needs to do a normal cleaning before and after our treatment because there will be some minimal stains after the ventilation process is completed.
  - The enclosed treatment areas need to be quarantined for a minimum of three hour.
- Our trained technicians will be fully equipped with a proper PPE for this treatment.
- **Sterifume** will be carried out with **VIROFF 753**, using Ultra Low Volume misting machines (ULV). Ensure all sensitive equipments such as PCs, photocopier machine, printers and etc. are covered with plastic sheets or newspaper and all air conditions are turned “off” prior to this treatment being carried out.
- The enclosed treatment area will be exposed with the solution for a minimum of 03 hours
- Premise is ready to use after 03 hours of the treatment
